Read About Us

We Will Help You

Boston Speech Therapy is devoted to helping clients achieve their ultimate goal of effective communication.

Online Teletherapy

Online speech therapy in your home or office via a secure portal or Skype.

Free Phone Consult

A consultation that lasts approximately 10-15 minutes long. We will attain information and develop a plan for treatment.

Speech & Language Evaluations

Our comprehensive assessments evaluate speech sound production, as well as receptive and expressive language abilities.

Bilingual Speech Evaluations

Our evaluations can be conducted in both English and Spanish. We are available to travel to a home, office, school or other location.

More Services

Bilingual Is Better

Bilingual children develop speech and language normally. Typically, learning two languages can take a longer time. However, bilingual children should still reach developmental milestones such as producing their first word at 12 months and using two-word phrases by two years of age.

Know More

What Our Patients Say

We always value our patients, listen from them directly of what they have to say about Boston Speech and Language.

"Mrs. Acosta was my son, Christopher's, speech therapist this year and she was fantastic at identifying his strengths and weakness in terms of communication. She is extremely dedicated and focused on her students' success. She was very thorough in her explanation of Christopher's speech generating device and its many benefits while pleasantly welcoming my questions and concerns. Mrs. Acosta took the time to detail how Christopher's new device would be utilized on a daily basis in order to further his currently limited communication skills. She is excellent at what she does."

Ms. Martinez
