discover the ibrido difference

When it comes to the growing demand for low silica quartz benchtops, Ibrido's less than 28% silica content is the lowest available in Australia, thanks to the exclusive Smartstone NewGen formulation. This groundbreaking low silica quartz formulation sets new industry standards in product responsibility, and its 56% recycled content highlights Smartstone's dedication to environmental care.

Ibrido's difference compared with previous Smartstone collections goes beyond leadership in low silica quartz to its innovation in engineered surface aesthetics. Ibrido's seven veined surfaces feature Smartstone's hybrid print technology (Ibrido is Italian for 'hybrid') which combines the aesthetic precision of porcelain with the benefits of quartz. Ibrido takes natural stone authenticity beyond the surface with *body veining* that perfectly meets surface colour and pattern in the body of the engineered base.

Identical jumbo slabs (3200mm x 1600mm) optimise design possibilities, and to create a beautifully seamless surface aesthetic *book matching* is available on two Ibrido surfaces, Calacatta Oro and Statuario Grigio.

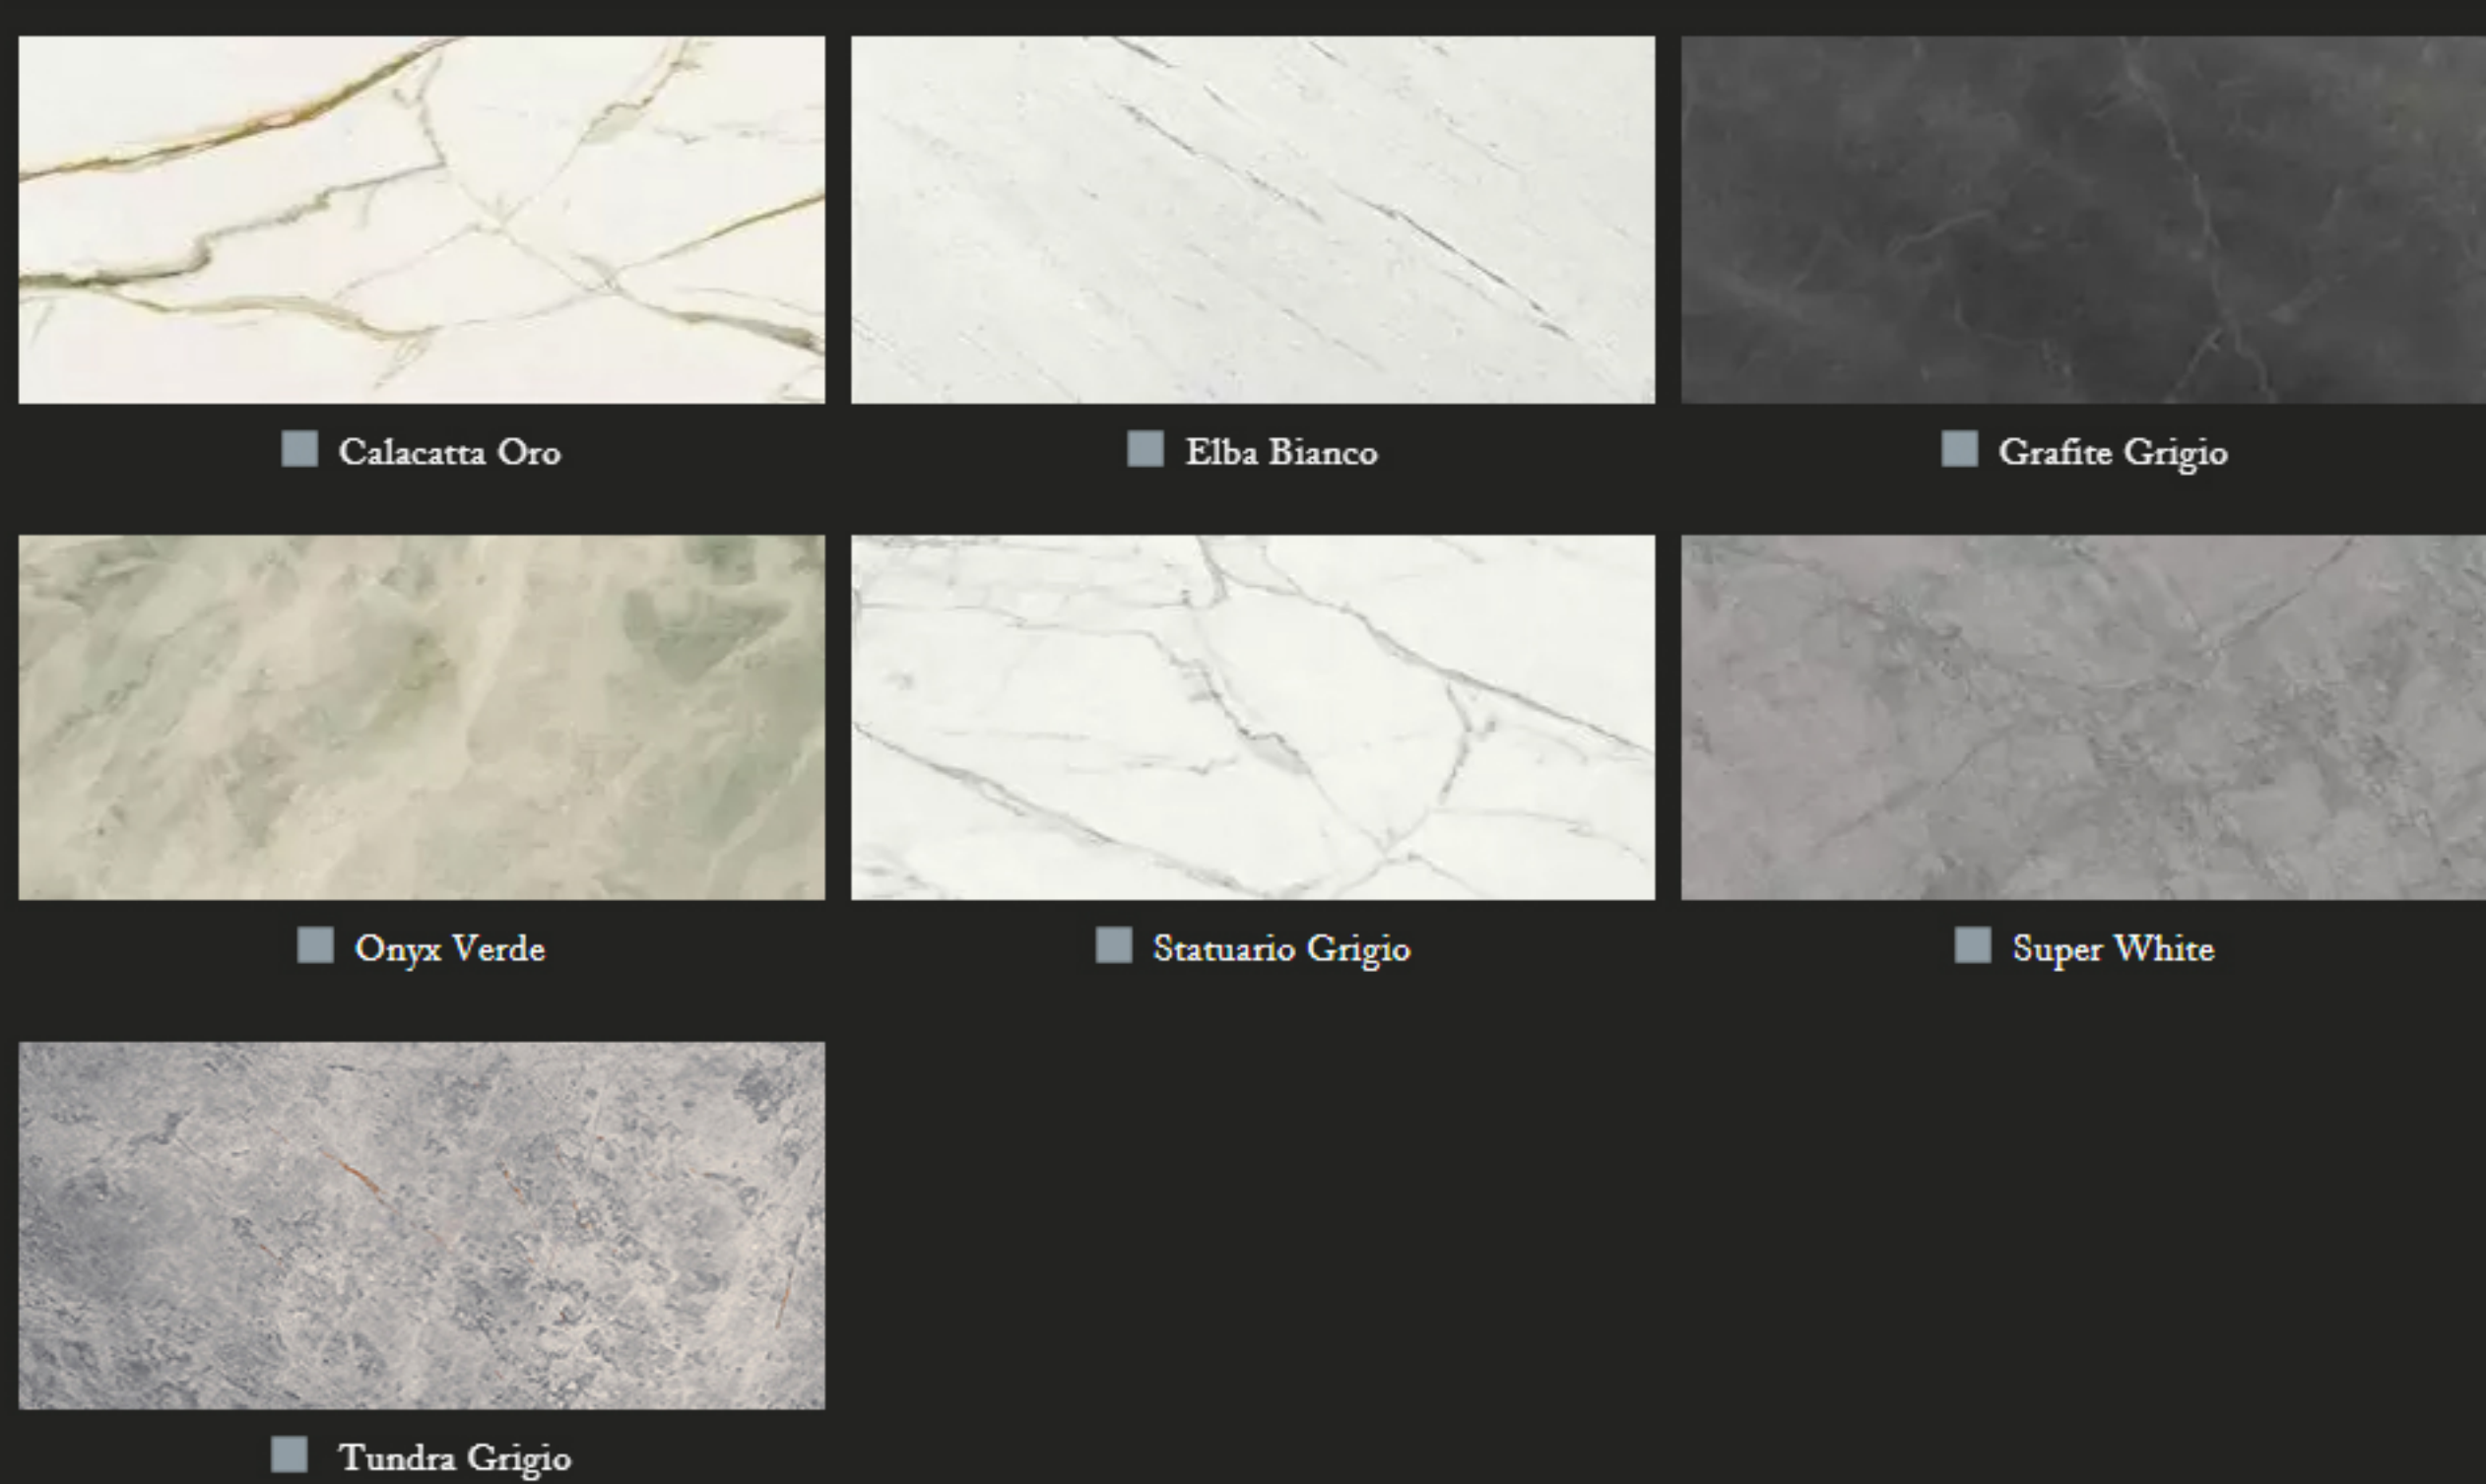

While low silica quartz Ibrido presents a new generation of engineered surfaces, it still offers Smartstone's trusted quality and durability; high performance, low maintenance Ibrido is stain, scratch, etch, chip and heat resistant. Of course, this collection comes with Smartstone's globally recognised accreditations, including Greenguard, Greenguard Gold and National Sanitation Foundation (NSF), as well as offering the peace of mind of Smartstone's 15-Year Warranty.

All Smartstone surfaces are suitable for internal applications only and not recommended for external use. Interior applications should avoid direct sunlight which may alter the surface's colour over time.
