discover the ibrido difference

When it comes to the growing demand for low silica quartz benchtops, Ibrido's less than 2% silica content is the lowest available in Australia, thanks to the exclusive Smartstone NewGen formulation. This groundbreaking low silica quartz formulation sets new industry standards in product recyclability, and its 20% recycled content highlights Smartstone's dedication to environmental care.

Ibrido's difference compared with previous Smartstone collections goes beyond leadership in low silica quartz to its innovation in engineered surface aesthetics. Ibrido's seven veined surfaces feature Smartstone's hybrid joint technology (Ibrido is Latin for 'hybrid') which combines the aesthetic precision of porcelain with the benefits of quartz. Ibrido takes natural stone authenticity beyond the surface with *body veining* that perfectly marries surface colour and pattern to the body of the engineered base.

Identical jointed slabs (2000mm x 1000mm) replicate design possibilities, and to create a beautifully seamless surface aesthetic *body veining* is available on two Ibrido surfaces, Caliente One and Statuaria Origin.

While low silica quartz Ibrido presents a new generation of engineered surfaces, it still offers Smartstone's trusted quality and durability: high performance, low maintenance Ibrido is stain, scratch, etch, chip and heat resistant. Of course, this collection comes with Smartstone's globally recognised warranties, including Overseas Gold and National Sanitation Foundation (NSF), as well as affixing the peace of mind of Smartstone's 12-Year Warranty.

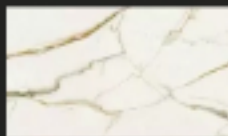

All Smartstone surfaces are suitable for interior applications only and not recommended for external use. Exterior applications should avoid direct sunlight which may alter the surface's colour over time.
